

AIM

To gather publicly available information about a target domain using **theHarvester**.

PROCEDURE

1. Open **Kali Linux Terminal**.
2. Enter the target domain given by your examiner.
3. Run theHarvester.
4. Select a search source.
5. Observe the collected information.

COMMAND

```
theHarvester -d example.com -b bing
```

Here:

- -d → domain
- -b → data source

Replace example.com with the **authorized domain given in your lab**.

RESULT

Thus, publicly available information about the target domain was successfully gathered using **theHarvester**.
