

Experiment No. 2: Vulnerability Assessment Using Nikto

Aim

To identify security vulnerabilities in a web server using the Nikto vulnerability scanner.

Software Required

- Kali Linux
- Nikto Tool
- VMware Workstation
- Target Web Server (Lab Environment)

Algorithm

1. Start Kali Linux.
2. Open the Terminal.
3. Launch the Nikto tool.
4. Enter the target website or IP address.
5. Perform the vulnerability scan.
6. Analyze the scan results.
7. Note the identified vulnerabilities.

Result

Successfully scanned the target web server using Nikto and identified the available vulnerabilities and security issues.
