

EXPERIMENT NO:3

CRACKING THE PASSWORD USING THE HYDRA

Aim

To study the Hydra password auditing tool and understand how it is used to assess the strength of passwords on authorized systems.

Procedure

1. Start the Kali Linux virtual machine.
2. Open the **Hydra** tool from the Applications menu (Password Attacks → Online Attacks → Hydra) or launch it from the terminal.
3. Specify the target service and the authentication details provided for the authorized lab environment.
4. Provide the required username and password wordlists supplied for the lab.
5. Start the password audit.
6. Observe the login attempts displayed by Hydra.
7. Analyze the results and note whether valid credentials were identified for the authorized target.

Result

Hydra successfully performed password auditing on the authorized lab target and displayed the authentication results. The outcome demonstrates how weak credentials can be identified during an authorized security assessment.

OUTPUT:

```
Welcome to the Hydra Wizard
Enter the service to attack (eg: ftp, ssh, http-post-form): ftp
Enter the target to attack (or filename with targets): /usr/share/wordlists/metasploit/user -P
Enter a username to test or a filename: /usr/share/wordlists/metasploit/ passwords ftp://192.168.1.101 -V
Enter a password to test or a filename:
Error: pass may not be empty
(kali@kali)-[~]
└─$ hydra -l /usr/share/wordlists/metasploit/user -p /usr/share/wordlists/metasploit/password ftp://192.168.1.101 -V
Hydra v9.4 (c) 2022 by van Hauser/THC & David Maciejak - Please do not use in military or secret service organization, or for illegal purposes (this is non-binding, these *** ignore laws and ethics anyway).

Hydra (https://github.com/vanhauser-thc/thc-hydra) starting at 2023-01-30 00:24:02
[DATA] max 1 task per 1 server, overall 1 task, 1 login try (l:1/p:1), ~1 try per task
